PARTS CATALOG (OCB518)

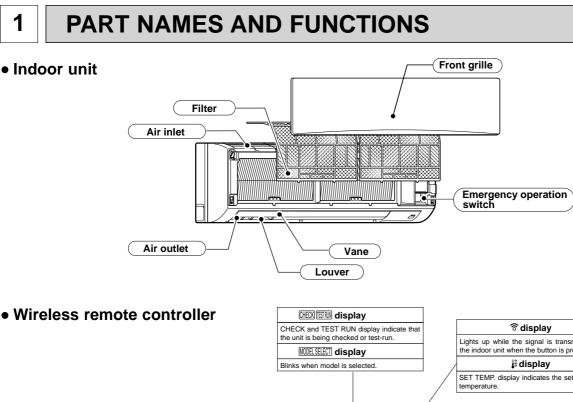

Use the specified refrigerant only.

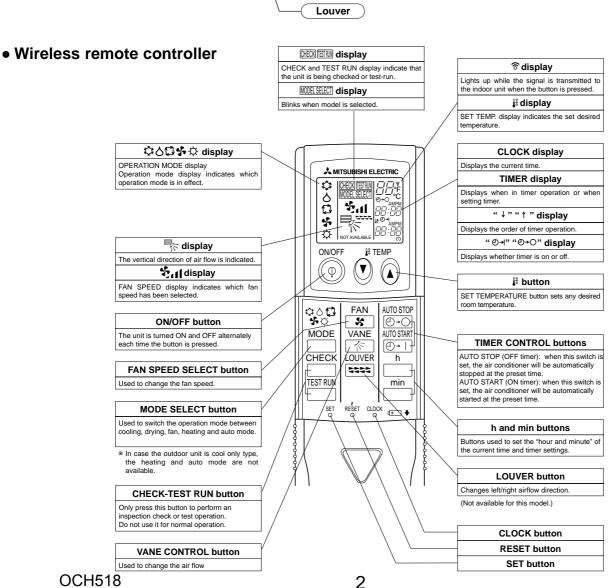

Never use any refrigerant other than that specified.

Doing so may cause a burst, an explosion, or fire when the unit is being used, serviced, or disposed of.

Correct refrigerant is specified in the manuals and on the spec labels provided with our products.

We will not be held responsible for mechanical failure, system malfunction, unit breakdown or accidents caused by failure to follow the instructions.

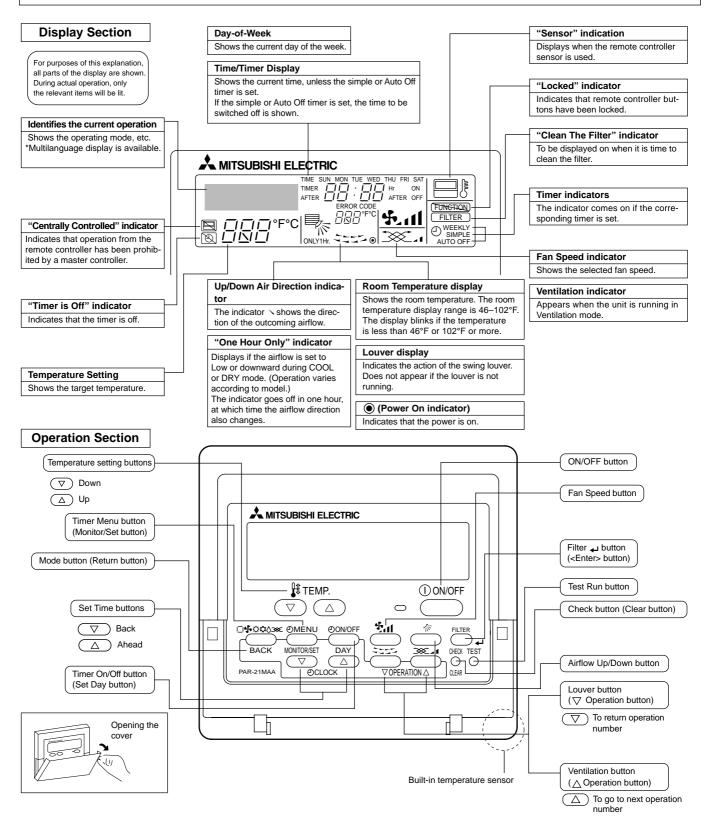

Wired remote controller

Note:

The phrase "Wired remote controller" in this manual refers only to the PAR-21MAA.

If you need any information for the other remote controller, please refer to either the installation manual or initial setting manual which are included in remote controller's box.

SPECIFICATION

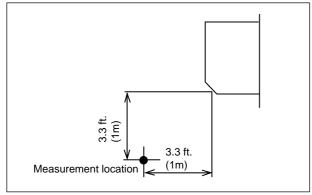

2-1. Specifications

NOTES:

- 1.At servicing for outdoor unit, always follow the wiring diagram of outdoor
- 2.In case of using MA-Remote controller, please connect to TB15.
- (Remote controller wire is non-polar.)
 3. In case of using M-NET, please connect to TB5. (Transmission line is non-polar.)
- 4.Symbol [S] of TB5 is the shield wire connection.
- 5.Symbols used in wiring diagram above are, _____: terminal block, ooo:connecter.
- 6. The setting of the SW2 dip switches differs in the capacity. for the detail, refer to the fig: %1. %Use copper supply wires.

Liquid pipe	φ9.52 (3/8)	φ9.52 (3/8)

MICROPROCESSOR CONTROL

INDOOR UNIT CONTROL 6-1. COOL OPERATION

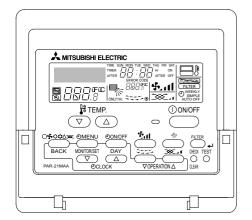

<How to operate>

- ① Press POWER ON/OFF button.
- ② Press the operation MODE button to display COOL.
- ③ Press the TEMP. button to set the desired temperature.

NOTE: The set temperature changes 2°F when the ♥ or △ button is pressed one time. Cooling 67 to 87°F

Control modes	Control details	Remarks
1. Thermostat	1-1. Thermostat function (Function to prevent restarting for 3 minutes)	
function	 Room temperature ≥ desired temperature + 2°F ···Thermo ON 	
	• Room temperature ≦ desired temperature ···Thermo OFF	
	1-2. Anti-freezing control	
	Detected condition: When the liquid pipe temp. (TH22) is 32°F or less in 16	
	minutes from compressors start up, anti-freezing control	
	starts and the thermo OFF.	
	Released condition: The timer which prevents reactivating is set for 3 minutes,	
	and anti-freezing control is cancelled when any one of the	
	following conditions is satisfied.	
	① Liquid pipe temp. (TH22) turns 50°F or above.	
	② The condition of the thermo OFF has become complete	
	by thermostat, etc.	
	③ The operation modes became mode other than COOL.	
	The operation stopped.	
2. Fan	By the remote controller setting (switch of 2 speeds)	
	Type Fan speed notch	
	2 speeds [Low], [High]	
	2 0,00000	
3. Vane	(1) Initial setting: Start at COOL mode and horizontal vane.	· "ONLY 1 Hr"
(up/down vane change)	(2) Vane position:	appears on the
	Horizontal →Downward A →Downward B →Downward C→Downward D→Swing→Auto ↑	wired remote controller.
	(3) Restriction of the downward vane setting	
	When setting the downward vane A, B, C or D in [Low] of the fan speed notch, the vane changes to horizontal position after 1 hour have passed.	
	The faile diviniges to Herizontal position and Throat have passed.	

6-2. DRY OPERATION

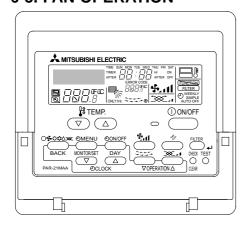

<How to operate>

- ①Press POWER ON/OFF button.
- ② Press the operation MODE button to display DRY.
- ③ Press the TEMP. button to set the desired temperature.

NOTE: The set temperature changes 2°F when the ♥or △ button is pressed one time. Dry 67 to 87°F

Control modes	Control details					Remarks
Thermostat function	Cotting the Dry therma by the thermeetet signal and the ream					
	Room	3 min. passed sind	ce starting operation	Dry thermo ON	Dry thermo OFF	
	temperature	Thermostat signal	Room temperature (T1)	time (min)	time (min)	
			T1≧ 83°F	9	3	
		ON	83°F > T1 ≧ 79°F 79°F > T1 ≧ 75°F	7	3	
	Over 64°F		79°F > 11 ≦ 75°F 75°F > T1	5 3	3 3	
		OFF	Unconditional	3	10	
	Less than 64°F	Less than 64°F Dry thermo OFF				
2. Fan	1-2. Freeze prev No control fu Indoor fan opera	unction	nding on the compress	or condition	S.	
	Dry thermo	Fan spe	eed notch			
	ON	[Lo	ow]			
	OFF	Excluding the following	Stop			
	OFF	Room temp. < 64°F	[Low]			
	Note: Remote controller setting is not acceptable.					
3. Vane (up/down vane change)	Same control as COOL operation					

6-3. FAN OPERATION

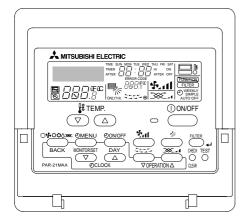

<How to operate>

- ①Press POWER ON/OFF button.
- ② Press the operation MODE button to display FAN.

Control modes			Remarks	
1. Fan	Set by remote controller.			
	Туре	Fan speed notch		
	2 speeds	[Low], [High]		
2. Vane (up/down vane change)	Same as the control perfor on the vane's downward bl	med during the COOL operation, bu ow setting	ut with no restriction	 Same control as COOL operation

6-4. HEAT OPERATION

<How to operate>

- ① Press POWER ON/OFF button.
- @Press the operation MODE button to display HEAT.
- ③ Press the TEMP. button to set the desired temperature.

NOTE: The set temperature changes 2°F when the ♥or △button is pressed one time. Heating 63 to 83°F.

<Display in HEAT operation> [DEFROST]

The [DEFROST] symbol is only displayed during the defrost operation. **[STANDBY]**

The [STANDBY] symbol is only displayed during the hot adjust mode.

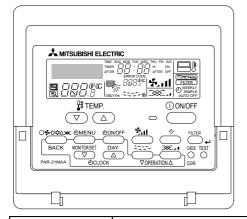

Control modes	Control details	Remarks
Thermostat function	1-1. Thermostat function (Function to prevent restarting for 3 minutes) • Room temperature ≤ desired temperature -2°FThermo ON • Room temperature ≤ desired temperatureThermo OFF	
2. Fan	By the remote controller setting (switch of 2 speeds)	
	Type Fan speed notch	
	2 speeds [Low], [High]	
	2-1. Hot adjust mode	
	The fan controller becomes the hot adjuster mode for the following conditions. ① When starting the HEAT operation ② When the thermoregulating function changes from OFF to ON. ③ When release the HEAT defrosting operation	
	Set fan speed by the remote controller [Low] [Extra Low] A B C	*1 "STAND BY" will be displayed during the hot adjust mode.
	A: Hot adjust mode starts. B: 5 minutes have passed since the condition A or the indoor liquid pipe temperature turned 95°F or more. C: 2 minutes have passed since the condition B. (Terminating the hot adjust mode)	
	2-2. Residual heat exclusion mode When the condition changes the auxiliary heater ON to OFF (thermostat or operation stop, etc), the indoor fan operates in [Low] mode for 1 minute.	This control is same for the model without auxiliary heater.

To be continued on the next page.

From the preceding page

Control modes	Control details	Remarks
2. Fan	2-3. Thermo OFF mode When the thermostat function changes to OFF, the indoor fan operates in [Extra low].	
	2-4. Heat defrosting mode The indoor fan stops.	
3. Vane control (Up/down vane change)	 (1) Initial setting: OFF → HEAT···[last setting] When the last setting is [Swing] ··· [Downward D] When changing the mode from exception of HEAT to HEAT operation ··· [Downward D] (2) Vane position: Horizontal → Downward A → Downward B → Downward C → Downward D → Swing → Auto 13) Restriction of vane position The vane is horizontally fixed for the following modes. (The control by the remote controller is temporally invalidated and control by the unit.) Thermo OFF Hot adjust [Extra low] mode Heat defrost mode 	

6-5. AUTO OPERATION [AUTOMATIC COOL/HEAT CHANGE OVER OPERATION]

<How to operate>

- ① Press POWER ON/OFF button.
- ② Press the operation MODE button to display AUTO.
- ③ Press the TEMP. button to set the desired temperature.

NOTE: The set temperature changes 2°F when the ♥or △button is pressed one time. Automatic 67 to 83°F

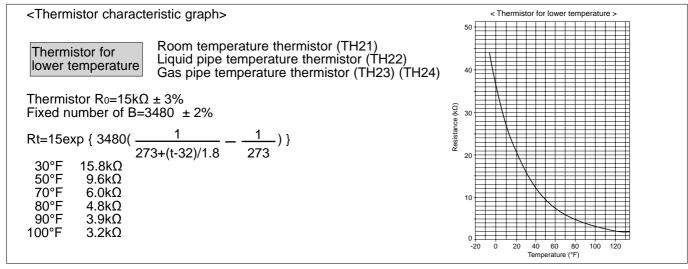

Control modes	Control details	Remarks
Initial value of operation mode	HEAT mode for room temperature < Desired temperature COOL mode for room temperature ≧ Desired temperature	
	 (1) HEAT mode → COOL mode Room temperature ≧ Desired temperature + 3°F. or 3 min. has passed (2) COOL mode → HEAT mode Room temperature ≧ Desired temperature - 3°F. or 3 min. has passed 	
3. COOL mode	Same control as cool operation	
4. HEAT mode	Same control as heat operation	

TROUBLESHOOTING

7-1. HOW TO CHECK THE PARTS PKFY-P24NKMU-E2.TH PKFY-P30NKMU-E2.TH

Parts name	Check points						
Room temperature thermistor (TH21)	Disconnect the connector then measure the resistance with a tester. (At the ambient temperature 50°F~86°F)						
Liquid pipe temperature thermistor (TH22)		Normal		Abnormal		to 7-1-1.	
Gas pipe temperature thermistor (TH23 ,24)	L	4.3kΩ~9.6kΩ Open or short					
Vane motor (MV)	Ν	Measure the re	esistance betw	een the termir	nals with a te	ster. (Coil temperature	e 68°F)
② Red — (M)		Normal			Abnormal		
4 Yellow Brown Orange Green		①-② Brown-Red	①-③ Brown-Orange	①-④ Brown-Yellow	①-⑤ Brown-Green	Open or short	
Connect pin No. 3 S		250Ω ± 7%					
Fan motor (MF) Refer to 7-1-3.							
Linear expansion valve (LEV) CN60 Disconnect the connector then measure the resistance value with a tester. (Coil temperature 68°F)							
White 1 Yellow 2		Normal				Abnormal	
LEV Blue 4		(1)-(5) White-Red	(2)-(6) Yellow-Brown	(3)-(5) Orange-Red	(4)-(6) Blue-Brown	Open or short	
Brown 6		200Ω ± 10%					

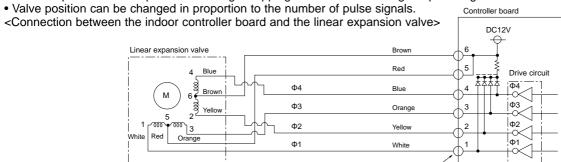

7-1-1. Thermistor

7-1-2. Liner expansion valve

- ① Operation summary of the linear expansion valve
- Linear expansion valve open/close through stepping motor after receiving the pulse signal from the indoor controller board.

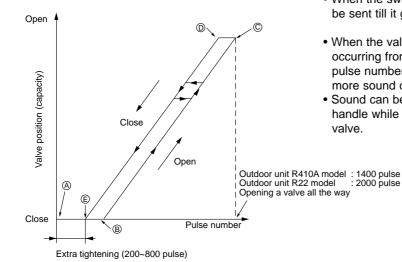

Connector(CN60)

<Output pulse signal and the valve operation>

Output	Output						
(Phase)	1	2	3	4			
φ1	ON	OFF	OFF	ON			
φ 2	ON	ON	OFF	OFF			
<i>ø</i> 3	OFF	ON	ON	OFF			
φ 4	OFF	OFF	ON	ON			

2 Linear expansion valve operation

Closing a valve : $1 \rightarrow 2 \rightarrow 3 \rightarrow 4 \rightarrow 1$ Opening a valve : $4 \rightarrow 3 \rightarrow 2 \rightarrow 1 \rightarrow 4$ The output pulse shifts in above order.

Note

- When linear expansion valve operation stops, all output phase become OFF.
- At phase interruption or when phase does not shift in order, motor does not rotate smoothly and motor will lock and vibrate.
- When the switch is turned on, 2200 pulse closing valve signal will be sent till it goes to point @ in order to define the valve position.
- When the valve moves smoothly, there is no sound or vibration occurring from the linear expansion valves, however, when the pulse number moves from © to @ or when the valve is locked, more sound can be heard than in a normal situation.
- Sound can be detected by placing the ear against the screw driver handle while putting the screw driver tip to the linear expansion valve.

③ Trouble shooting

Symptom	Check points	Countermeasures
Operation circuit failure of the micro processor	Disconnect the connector on the controller board, then connect LED for checking.	Exchange the indoor controller board at drive circuit failure.
Linear expansion valve mechanism is locked.	Motor will idle and make a ticking noise when the motor is operated while the linear expansion valve is locked. This ticking sound is the sign of the abnormality.	Exchange the linear expansion valve.
Short or breakage of the motor coil of the linear expansion valve	Measure the resistance between each coil (white-red, yellow-brown, orange-red, blue-brown) using a tester. It is normal if the resistance is in the range of $200\Omega \pm 10\%$.	Exchange the linear expansion valve.
Valve does not close completely.	To check the linear expansion valve, operate the indoor unit in fan mode and at the same time operate other indoor units in cooling mode, then check the pipe temperature < liquid pipe temperature > of the indoor unit by the outdoor multi controller board operation monitor. During fan operation, linear expansion valve is closed completely and if there is any leaking, detecting temperature of the thermistor will go lower. If the detected temperature indicated in the remote controller, it means the valve is not closed all the way. It is not necessary to exchange the linear expansion valve, if the leakage is small and not affecting normal operation.	If large amount of refriger- ant is leaked, exchange the linear expansion valve.
Wrong connection of the connector or contact failure	Check the color of lead wire and missing terminal of the connector.	Disconnect the connector at the controller board, then check the continuity.

7-1-3. DC Fan motor (fan motor/indoor controller circuit board)

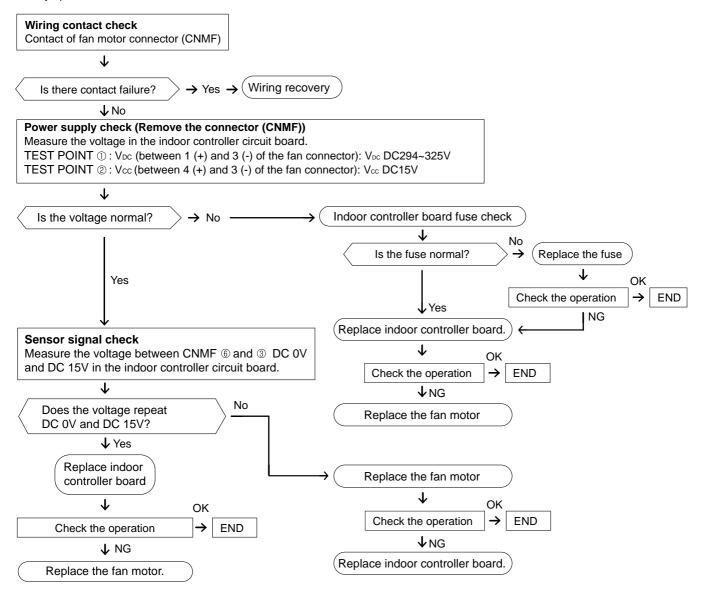

Check method of DC fan motor (fan motor/indoor controller circuit board)

- ① Notes
 - · High voltage is applied to the connecter (CNMF) for the fan motor. Pay attention to the service.
 - Do not pull out the connector (CNMF) for the motor with the power supply on.

(It causes trouble of the indoor controller circuit board and fan motor.)

Self check

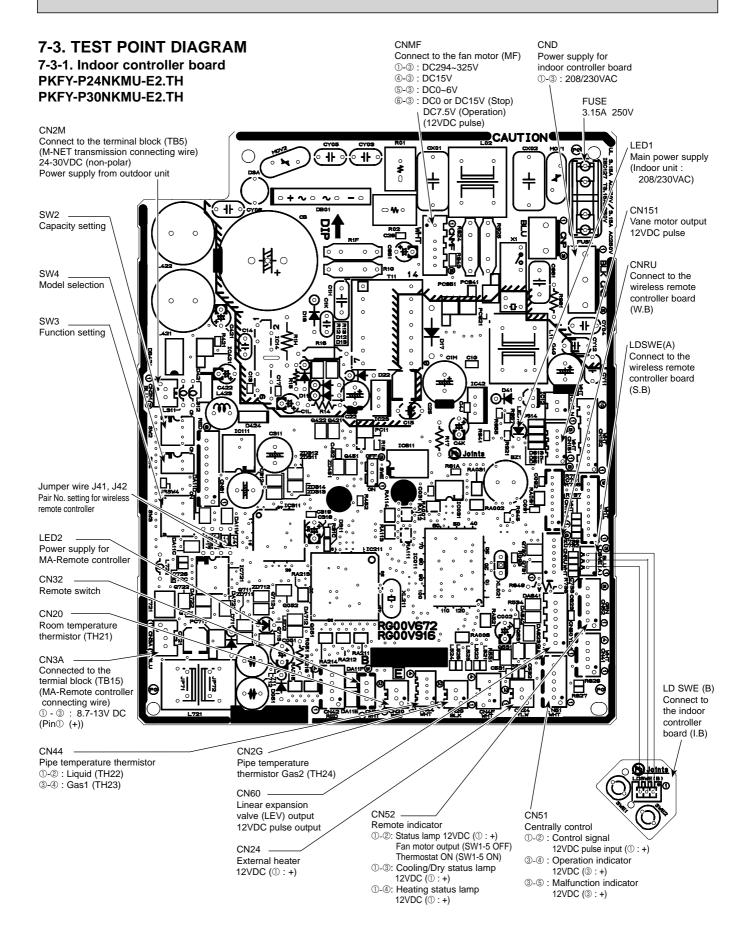

Symptom: The indoor fan cannot turn around.

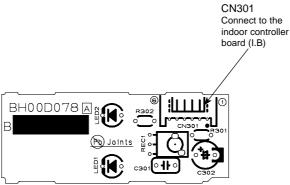

7-2. Function of Dip switch PKFY-P24NKMU-E2.TH PKFY-P30NKMU-E2.TH

DISASSEMBLY PROCEDURE

PKFY-P24NKMU-E2.TH PKFY-P30NKMU-E2.TH

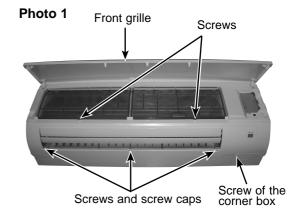

Be careful when removing heavy parts.

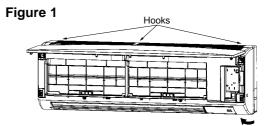

OPERATION PROCEDURE

1. REMOVING THE PANEL

- (1) Press and unlock the knobs on both sides of the front grille and lift the front grille until it is level. Pull the hinges forward to remove the front grille. (See Photo 1)
- (2) Remove 3 screw caps of the panel. Remove 5 screws. (See Photo 1)
- (3) Unfix 3 hooks. (See Figure 1)
- (4) Hold the lower part of both ends of the panel and pull it slightly toward you, and then remove the panel by pushing it upward.
- (5) Remove the screw of the corner box. (See Photo 1) Remove the corner box.

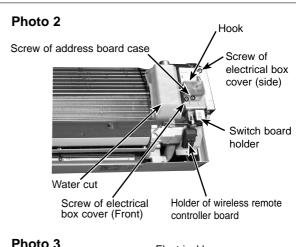

PHOTOS & ILLUSTRATIONS

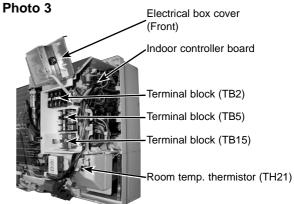

2. REMOVING THE ADDRESS BOARD, THE INDOOR CONTROLLER BOARD AND THE WIRELESS CONTROLLER BOARD

- (1) Remove the panel and the corner box. (Refer to procedure 1)
- (2) Remove the screw and hook of address board case. (See Photo 2)
- (3) Disconnect the connectors of address board.
- (4) Remove the front and side electrical box covers (each 1 screw).
- (5) Disconnect the connectors on the indoor controller board. (See Photo 3)
- (6) Remove the switch board holder and open the cover.
- (7) Pull out the indoor controller board toward you then remove the indoor controller board and switch board. (See Photo 3)
- (8) Remove the holder of wireless remote controller board.
- (9) Disconnect the connector of wireless remote controller board and remove the wireless remote controller board from the holder.

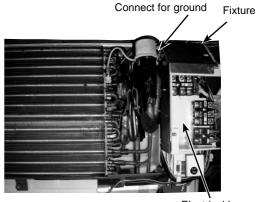

OPERATION PROCEDURE

3. REMOVING THE ELECTRICAL BOX

- (1) Remove the panel and the corner box. (Refer to procedure 1)
- (2) Remove the screw and hook of address board case.
- (3) Remove the front and side electrical box covers (each 1 screw).
- (4) Remove the transmission wiring of TB5, the power supply wiring of TB2 and the wiring of MA-remote controller (TB15).
- (5) Disconnect the connectors on the indoor controller board.
- (6) Disconnect the connector for ground wire.
- (7) Remove the screw on lower side of the electrical box. (See Photo 5)
- (8) Push up the upper fixture catch to remove the box, then remove it from the box fixture.

PHOTOS

Photo 4

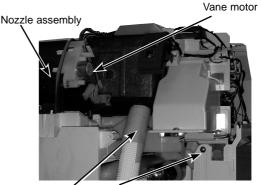

Electrical box

4. REMOVING THE NOZZLE ASSEMBLY (with VANE and VANE MOTOR) AND DRAIN HOSE

- (1) Remove the panel and corner box. (Refer to procedure 1)
- (2) Remove the electrical box covers. (Refer to procedure 2)
- (3) Disconnect the vane motor connector (CN151) on the indoor controller board.
- (4) Pull out the drain hose from the nozzle assembly, and remove nozzle assembly. (See Photo 5)

Photo 5 (see the bottom)

Drain hose Screw of electrical box

5. REMOVING THE VANE MOTOR

- (1) Remove the nozzle assembly. (Refer to procedure 4)
- (2) Remove 2 screws of the vane motor unit cover, and pull out the vane motor unit.
- (3) Remove 2 screws of the vane motor unit.
- (4) Remove the vane motor from the vane motor unit.
- (5) Disconnect the connector from the vane motor.

OPERATION PROCEDURE

6. REMOVING THE INDOOR FAN MOTOR AND THE LINE FLOW FAN

- (1) Remove the panel and the corner box. (Refer to procedure 1)
- (2) Remove the electrical box (Refer to procedure 2) and the nozzle assembly (Refer to procedure 3).
- (3) Remove the water cut. (See Photo 2)
- (4) Remove the screw fixing the line flow fan. (See Photo 8)
- (5) Remove 5 screws fixing the motor bed. (See Photo 7)
- (6) Remove the lead wire of pipe thermistor from the hook of motor bed. (See Photo 7)
- (7) Remove the screw fixing motor band. (See Photo 7)
- (8) Remove the motor bed together with fan motor and motor band
- (9) Remove 3 screws fixing the left side of the heat exchanger. (See Photo 9)
- (10) Lift the heat exchanger, and pull out the line flow fan to the lower-left.

7. REMOVING THE LIQUID PIPE THERMISTOR AND GAS PIPE THERMISTOR

- (1) Remove the panel and the corner box. (Refer to procedure 1)
- (2) Remove the electrical box covers. (Refer to procedure 2)
- (3) Remove the water cut. (See Photo 2)
- (4) Remove the liquid pipe thermistor and gas pipe thermistors.
- (5) Disconnect the connector (CN44) (CN2G) on the indoor controller board. (TH22 and TH23/CN44, TH24/CN2G)

Photo 10

OPERATION PROCEDURE

8. REMOVING THE HEAT EXCHANGER AND LEV

- Remove the panel and the corner box. (Refer to procedure
 1)
- (2) Remove the electrical box (Refer to procedure 3) and the nozzle assembly (Refer to procedure 4.).
- (3) Remove the water cut.
- (4) Remove the pipe thermistors (Refer to procedure 7).
- (5) Disconnect the connector (CN60) on the indoor controller board and the connector for ground wire.
- (6) Remove 3 screws fixing the left side of the heat exchanger. (See Photo 9)
- (7) Remove the heat exchanger with LEV.

9. REMOVING THE ROOM TEMPERATURE THERMISTOR

- (1) Remove the panel and corner box. (Refer to procedure 1)
- (2) Remove the electrical box covers.
- (3) Remove the room temperature thermistor.
- (4) Disconnect the connector (CN20) on the indoor controller board.
